Save Time and Money while Improving Productivity, Efficiency and Expandability

PCS *digital* System incorporates state-of-the-art digital technology with dozens of features to promote communication effectiveness.

Answering Machine Operation – Enables users to hear and screen messages in real time.

Automated Attendant – Eliminates the need for a dedicated telephone answering person, freeing up personnel to handle other duties.

Automatic Busy Redial – Redials busy numbers while you continue to work on other tasks.

Automatic Day or Night Mode – Switches automatically to night answer, ensuring call coverage at all times.

Automatic Hold – Skip from one line to another without depressing the hold button.

Desktop Ancillary Devices – Connect answering machines, fax machines, modems and credit card machines to your digital phone, allowing you to perform other tasks while talking on the phone.

Caller ID – Displays caller's name and number on the phone's display screen keeping you aware of your incoming calls. The Caller ID log captures up to 200 caller names and numbers for later review.

Directory Dial – Conveniently stores up to 200 internal stations and/or external contact names and numbers.

One Button Record – Record and store important conversations with the push of a button.

Remote System Access – Retrieve calls and access system features from outside the office.

Ring Line Priority – Connects incoming calls automatically based on priority by simply lifting the handset.

Soft Key Access – Eliminates time-consuming programming problems with easy-to-use feature activation. Want to make a conference call? Just push the button as it appears on the display.

Speakerphone – Speak hands free on all PCS *digital* System telephones.

System Growth – Upgrade and expand your system as your company grows while protecting your initial investment.

Voice over Busy Station – Announces calls privately to the busy station without call interruption.
