XTS

Refurbished Eclipse II

Ready to Order? Call 800 362-6740.

Key System Unit - KSU

VODAV3000-00 - Key System Unit (KSU) Cabinet for System Components.

Power Supply

VODAV3071-10 - 350 watt power supply powers the KSU and the components inside.

Master Processing Board

VODAV3030-01- Master Processing Card.

Service Board

VODAV3035-00 - Miscellaneous Service Card.

Loop Start Card

VODAV3031-03 - Eight port loop start card.

Telephone Interface Board

VODAV3032-40 - Twenty-four port digital telephone interface card.

Voicemail

VODAV304-04- A 4-port, voice mail device provides callers the option to leave a verbal message for the recipient. It may act as an auto attendant to answer the live calls with an announcement and direct the callers to an extension, ACD queue or mailbox. Most modern phone systems are installed with a voicemail device. Vodavi [TalkPath voice mail](#) user's guide available.

Vodavi XTS Telephones - Priced Separately

VODAV3012-71 - Infinite 8-button Executive speakerphone with display. Charcoal.

VODAV3015-71 - Infinite 30-button Executive speakerphone with display. Charcoal.

VODAV9018-75 - Wanderer 2.4 Ghz cordless phone.

Optional Add-on and Expansion Features

For Remote Programming:

VODAV3030-30- Allows remote programming, maintenance and diagnostics.

For single line devices:

VODAV3033-02- Adds an additional 8 ports for single line devices (residential phone sets, fax machines, etc.).

For T1 or T1/PRI ? Lines:

VODAV8031-30 - T1 Card, CSU and Cable.

A T1 provides 24 high-quality "lines" and requires a monthly service plan from your phone company, but is usually less expensive than paying for 24 individual lines through the phone company. A T1 can be used for regular phone calls, faxing and with additional items that may be provided by your T1 provider, also enables interoffice connections, internet traffic, and data. T1 allows a company to send long distance calls directly to a long-distance provider, bypassing the local phone company. Add PRI capability (see VODAV3031-40) for caller ID or ANI.

Cards

Photo Not Available.

VODAV3031-40 - Supports PRI lines, a type of high-speed ISDN (Integrated Services Digital Network) connection. PRI, when used with a T1, provides 23 channels which can be used for phone calls and one channel for signaling information (assigning channels as voice, data, videoconferencing, etc.) and features such as caller ID and hotel information services. PRI ISDN requires the use of a T1 line and T-1 service from your phone company. See VODAV8031-30.
